Claims 1-7 (cancelled).

- a media path;
- a first roller disposed proximate the media path;
- a knife defined by an edge and supported by the first roller, wherein the edge is selectively extendable from the first roller;

a cutting anvil disposed within the second roller and operably moveable along path substantially transverse relative to the elongated slot from a first position in which the cutting anvil is withdrawn from the slot to a second position in which the anvil is exposed within the slot.

Claim 10 (canceled).

Application No.: 10/764,767
Attorney Docket No.: 10012147-4
Response/Amendment

1 Claims 12-37 (canceled).

2
3 Claim 38 (currently amended). The document processing apparatus of claim 8,
4 wherein the anvil path is substantially defined by an anvil receiving slot contained
5 within the second roller.

6 Claim 39 (currently amended). The document processing apparatus of claim 8,
7 wherein the anvil path is substantially arcuate and substantially concentric relative to
8 the second roller.

9 Claim 40 (canceled).

10
11 Claim 41 (currently amended). ~~[[The]]~~A document processing apparatus,
12 comprising of claim 40, wherein:

13 a media path;

14 a roller disposed proximate the media path;

15 an elongated slot defined by the roller;

16 a knife defined by an edge and supported within the elongated slot; and

17 an anvil device disposed within the roller and operatively movable between an
18 exposed position in which the anvil device is in substantially juxtaposed registered
19 alignment with the slot and a withdrawn position in which the anvil device is not in
20 substantially juxtaposed registered alignment with the slot, wherein:

21 the knife is movable between a retracted position and an extended
22 position; and,

23 movement of anvil device into the exposed position is substantially
24 blocked by the knife when the knife is in the extended position and
25 substantially unblocked when the knife is in the retracted position.

Claim 42 (previously presented). The document processing apparatus of claim 41,
wherein movement of the knife to the extended position is substantially blocked by
the anvil device when the anvil device is in the exposed position.

1 Claim 43 (currently amended). The document processing apparatus of claim
2 ~~[[40]]~~41, wherein the anvil device is movable between the exposed position and
3 withdrawn position along a path transverse to the slot.

4 Claim 44 (currently amended). The document processing apparatus of claim
5 ~~[[40]]~~41, wherein the anvil device comprises a cutting anvil.

6
7 Claim 45 (previously presented). The document processing apparatus of claim 44,
8 wherein the cutting anvil defines a notched cutting slot.

9 Claim 46 (currently amended). The document processing apparatus of claim
10 ~~[[40]]~~41, wherein the anvil device comprises a creasing anvil.

11 Claim 47 (previously presented). The document processing apparatus of claim 46,
12 wherein the creasing anvil defines a rounded creasing slot.

13
14 Claim 48-54 (canceled).
